PRESS RELEASE

Velbon®

4 APRIL 2011

ULTRA REXi L - TALL, SMALL, BIG CAPACITY, LIGHTWEIGHT

The perfect traveller's choice

- 1/3rd smaller (closed) than similar capacity and height tripods
- Lighter than most full-size Carbon Fibre tripods
- Fit your full-size & capacity tripod in your hand luggage

Announcing the arrival of the Velbon Ultra Rexi L tripod. Pushing the boundaries of technology, the REXi L delivers a professional-quality tripod that is **Ultra Compact** when folded but giving **full-size extended height** and **professional load bearing capacity** whilst remaining **Ultra Light weight** through its Magnesium Alloy collar construction.

The ULTRA REXi L incorporates Velbon's Patented Trunnion legs (5 sections) to create a tripod just 36cm long when folded, extending by 4.25 times its size, to an extended height of 153cm. Its solid construction and 30mm top leg sections give outstanding support with a professional recommended load capacity of 4kg, whilst using Magnesium Alloy components to keep weight down to just 1.3kg, comparable to many carbon fibre tripods with a similar Maximum height.

The ULTRA REXi L also has multi-angle legs especially useful for Macro photography, or for use on uneven surfaces when walking or travelling. Its splittable, reversible centre column with quick-lock lever will accept any tripod head with 1/4" or 3/8" thread so users can make their own perfect combination.

Supplied complete with case that can also accommodate a range of tripod heads.

Features / Technical Spec:

- Maximum height: 153cm
- Minimum height: 9.5cm
- Folded length: 36cm
- Weight: 1.31kg
- Top leg diameter: 30mm
- Ideal max load: 4kg
